

ZEGA ZBIG Treasury Income

February 2024

Investment Vehicle: Separately Managed Account
Portfolio Manager: Jay Pestrichelli & Mick Brokaw

Inception Date: December 2022

Strategy Overview

- The portfolio is built with bullish options to capture some appreciation of the S&P 500 and US Government Treasuries
- Provides a targeted payout in 24-36 months, as the portfolio exclusively utilizes products with a maturity date.
- "Buffered" refers to the portfolio's range of protection from negative index movements.
- Targets a baseline ~1-3%+ and an upside cap ~20-25%
- The target capture rate ~35-40%
- Swaps out fixed income and equity risk with US Treasuries when held to maturity.
- Accounts own securities that are historically very liquid meaning, unlike structured notes, the client can exit the strategy prior to maturity at a fair price. However, early exit payouts may not match the targeted returns.

Strategy Risks & Disclosures

* During December 2023, ZEGA Financial discovered an error in the Net Return calculation concerning the allocation of quarterly fees. The Net Returns for the months of April through November 2023 have been corrected to reflect the proper fee allocation.

Note: Returns are expressed in US Dollars and calculated net of actual fees. Performance includes reinvestment of dividends and other earnings. ZEGA Financial is a registered investment adviser and investment manager that specializes in derivatives. ZEGA is a separate accounts manager and all returns expressed herein are solely from the separate accounts business within ZEGA. ZEGA's Buffered Index Growth Treasury Income (ZBIG Treasury Income) aims to capture 35-45% of the upside of the market capped at 20-25% participation as well as generate some income ranging from 1-3% at maturity. The portfolio carries little to no equity risk. This strategy typically has lower volatility than the underlying index and can therefore help reduce portfolio risk by substituting this product for the underlying index. ZBIG Treasury Income provides a targeted payout in 24-36 months as the portfolio exclusively utilizes products with a maturity date. "Buffered" refers to the portfolio's range of protection from negative index movements. The portfolio swaps out equity risk for a short-term US Government Treasury portfolio. ZBIG Treasury Income is implemented in either an IRA or taxable account. This composite includes all portfolios that were at least 70% dedicated to this strategy. The benchmark is The ICE U.S Treasury 1-3 Year Bond Index. The Index is market value weighted and is designed to measure the performance of U.S. dollar-denominated, fixed rate securities with minimum term to maturity greater than one year and less than or equal to three years. The minimum account size for this composite is \$30,000.
