Global Real Estate Allocation

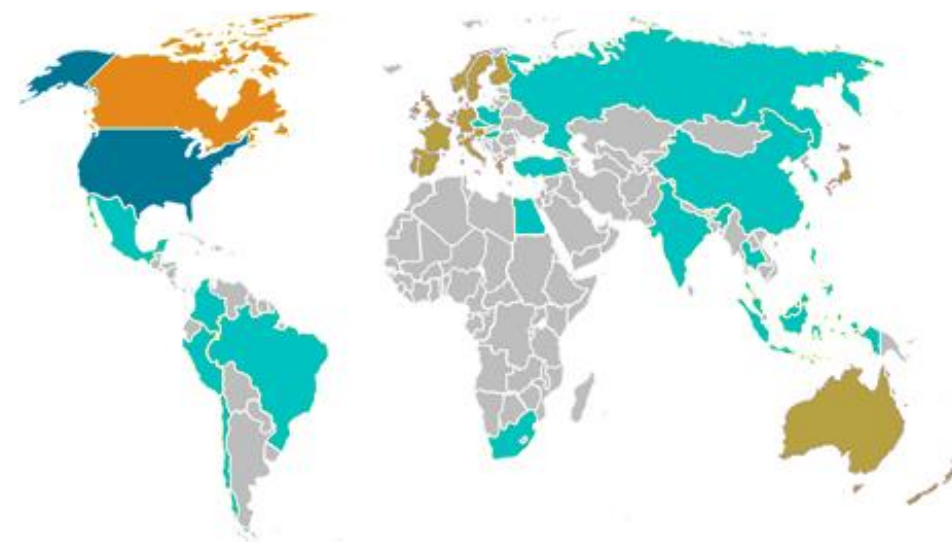

March 31, 2021

The global real estate allocation of your portfolio will be comprised of globally diversified publicly listed real estate securities. Physical property values tend to lag those of listed property. As real estate securities are more liquid and more frequently traded than buildings and land, they tend to reflect changes in valuation more quickly than agent and government appraisals, which in general are based on past information. So, not only are real estate securities easier to buy and sell than actual real estate, they reflect new information more quickly than the physical property market.

Real estate has a role in a well-diversified portfolio because it tends to behave as a distinct asset class to stocks and bonds. However, portfolios of Canadian real estate securities will not only be concentrated but will also tend to have a higher correlation with your physical real estate holdings based in Canada. As a result, the real estate allocation of the Global 60EQ-40FI Portfolio will be diversified across multiple countries and regions.

Portfolio holdings are subject to change. Diversification does not eliminate the risk of market loss.

Data as at March 31, 2021. The allocation of real estate securities in the DFA Global 60EQ-40FI Portfolio is based on the portfolio holdings of the funds listed on page 9. The Global Real Estate Allocation does not include REITs in the hedged and unhedged classes of the Canadian, US, and International core funds (see page 9). Country weights are broken down as a percentage of the DFA Global Real Estate Securities Fund and not of the portfolio as a whole.

Global Real Estate Allocation

Commissions, trailing commissions, management fees, and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. Mutual funds are not guaranteed; their values change frequently, and past performance may not be repeated. International and emerging market investments include additional risks, including political instability and currency fluctuations.

This presentation provides certain selected information regarding the DFA Global 60EQ-40FI Portfolio. To achieve the portfolio's investment objectives, the assets of the portfolio will generally be allocated to other funds managed and advised by DFA Canada and its affiliates that invest in Canadian, U.S. and international equity securities, real estate securities, and fixed income securities. Certain of the information provided in this presentation is based on portfolio holdings of the underlying funds held by the DFA Global 60EQ-40FI Portfolio as of the dates shown. The portfolio's allocations among the underlying funds will be adjusted periodically by the sub-advisor without notice and the holdings of the underlying funds will also change. All data is in Canadian dollars as at the dates indicated.
