ZEGA's Buffered Index Growth

- ❑ First and foremost, ZBIG strategies provide a market buffer: *Helps limit losses in equity markets*
- ❑ While still capturing significant growth when the stock market goes up
- ❑ By swapping stock market risk for short-duration fixed income risk
- ❑ By aligning index option expirations with fixed income maturities over 18 to 36 months
- ❑ In a fully liquid, fully transparent Separate Managed Account (SMA) format

ZBIG, for investors who...

- ❑ Look to outperform the S&P 500 and a profile tolerant of stock risk – **ZBIG Leveraged** – or
- ❑ Look to capture the majority of equity growth, but want protection when the market goes down – **ZBIG Standard** – or
- ❑ Need a retirement solution with no margin and little to no equity risk – **ZBIG IRA** – or
- ❑ Want to also avoid corporate bond risk – **ZBIG** built with treasuries

For investors who believe in stock market growth, but want a buffer against equity losses

up to
100%

The ZBIG family of strategies complements or replaces large-cap equity portfolio slices. For clients with conservative, moderate, or aggressive risk profiles; who are receptive to an 18- to 36-month time frame allowing positions to reach full value.

ZEGA's ZBIG product family

5 models built on investor goals, profiles, and account type

Model	Investor risk profile	Fixed income class	Equity risk <i>at maturity</i>	Fixed income risk <i>at maturity</i>	S&P capture rate <i>at maturity</i>
ZBIG Treasury Income	Conservative	Treasuries	0%	0%	50-60% (20% cap)
ZBIG Treasury	Conservative	Treasuries	0%	0%	45-55%
ZBIG IRA	Moderate-Conservative	Short-duration corporates	0%	-10%	70-85%
ZBIG Standard	Moderate	Short-duration corporates	-10%	-10%	90-100%
ZBIG Leverage	Moderate-Aggressive	Short-duration corporates	-40%	-10%	110-120%

ZBIG Treasury Income methodology

- ❑ Treasury Income provides for 50-60% capture of equity market upside utilizing long call spreads (20% cap)
- ❑ Purchase and hold to maturity short-duration treasuries (Capture and income rates tie directly to yield: the higher the yield, the higher the capture rate or income)
- ❑ Align treasury maturity dates with option expirations within 24- to 36-month time frame

Upside capture rates based on ~4.8% 2-year yield. Strategy may not be available if the yield on 2- or 3-year treasuries drops below 3.5%.

ZBIG Treasury methodology

- ❑ Purchase at-the-money SPY calls to simulate long equity market exposure of 45-55%
- ❑ Purchase and hold to maturity short-duration treasuries (Capture and income rates tie directly to yield: the higher the yield, the higher the capture rate or income)
- ❑ Align treasury maturity dates with option expirations within 24- to 36-month time frame

Upside capture rates based on ~4.8% 2-year yield. Strategy may not be available if the yield on 2- or 3-year treasuries drops below 3.5%.

ZBIG IRA methodology

- ❑ Purchase at-the-money SPY calls to simulate long equity market exposure of 70-85%
- ❑ Purchase and hold to maturity corporate high-yield, short duration, fixed income ETFs utilizing free cash
- ❑ Plan to pay for the long call options with ETF income
- ❑ Align fixed income maturity dates with option expirations within 18- to 36-month time frame

As positions in the strategy approach either expiration or maturity, ZEGA may opt to roll them to lock in gains or reinvest avoided losses at advantageous (i.e. lower) market prices.

Note: P&L represents projected strategy return dependent on fixed income ETF allocation suffering no losses from defaults, delivering all dividends, and returning the expected full intrinsic value at maturity.

ZBIG Standard methodology

- ❑ Purchase at-the-money SPY calls to simulate long equity market exposure of 90-100%
- ❑ Sell put spreads at 25-40% out of the money to generate income
- ❑ Purchase and hold to maturity corporate high-yield, short duration, fixed income ETFs utilizing free cash
- ❑ Plan to pay for the index calls with income from put spreads and the ETFs
- ❑ Align fixed income maturity dates with option expirations within 18- to 36-month time frame

As positions in the strategy approach either expiration or maturity, ZEGA may opt to roll them to lock in gains or reinvest avoided losses at advantageous (i.e. lower) market prices.

Note: P&L represents projected strategy return dependent on fixed income ETF allocation suffering no losses from defaults, delivering all dividends, and returning the expected full intrinsic value at maturity.

ZBIG Leveraged methodology

- ❑ Purchase at-the-money SPY calls to simulate long equity market exposure of 110-120%
- ❑ Sell put spreads at 25-40% out of the money to generate income
- ❑ Purchase and hold to maturity corporate high-yield, short duration, fixed income ETFs utilizing free cash
- ❑ Plan to pay for the index calls with income from put spreads and the ETFs
- ❑ Align fixed income maturity dates with option expirations within 18- to 36-month time frame

As positions in the strategy approach either expiration or maturity, ZEGA may opt to roll them to lock in gains or reinvest avoided losses at advantageous (i.e. lower) market prices.

Note: P&L represents projected strategy return dependent on fixed income ETF allocation suffering no losses from defaults, delivering all dividends, and returning the expected full intrinsic value at maturity.

Implementing ZBIG

- ❑ ZEGA deploys all ZBIG strategies in an SMA
- ❑ Account minimums \$75K, except Treasury models start at \$125K
- ❑ ZBIG Standard and ZBIG Leverage require margin accounts
- ❑ Returns will vary according to market prices on the day of entry
- ❑ Liquid nature of models and account format permit early exits, but we recommend clients hold positions to maturity to, potentially, capture the maximum return
- ❑ ZEGA may, possibly, as positions approach maturity and expiration roll them early to the next series

*A fixed maturity
product with*
**transparency
and
liquidity**

The risks of investing in ZBIG

- ❑ ZBIG Leveraged & Standard versions will experience accelerating losses should the equity market drop below the buffer zone
- ❑ Corporate bond ETFs held in the portfolio carry interest rate risk as well as default risk
- ❑ All the return profiles presented here require the short-duration, high-yield fixed income market to avoid material default scenarios
- ❑ Closing an account before expiration or maturity can significantly impact targeted return
- ❑ Non-retirement accounts should expect taxable events in the last year of the strategy cycle

Fixed income risk represents one of the most significant risk to any ZBIG strategy

Why ZBIG swaps risk

Since 2001, the short-duration high-yield bond market experienced less volatility—lower standard deviation—than the S&P 500

Risk illustrated as the 1-year standard deviation of the Barclay's High Yield 1-3yr Total Return Index vs. the S&P 500 Total Return Index
