# ZEGA's Buy & Hedge Strategy

- ❑ B&H *buys* stock market exposure to capture 65% to 80% of upside
- ❑ B&H *hedges* to protect clients in severely down markets
- ❑ Portfolio pairs options and yield-focused positions in a strategy built to capture growth while protecting against declines
- ❑ Separate Managed Account structure provides liquidity, transparency, and attention to individual client needs

*In any 12-month period,  
B&H intends to protect  
against equity losses in  
excess of*

**8<sup>to</sup> 10%**

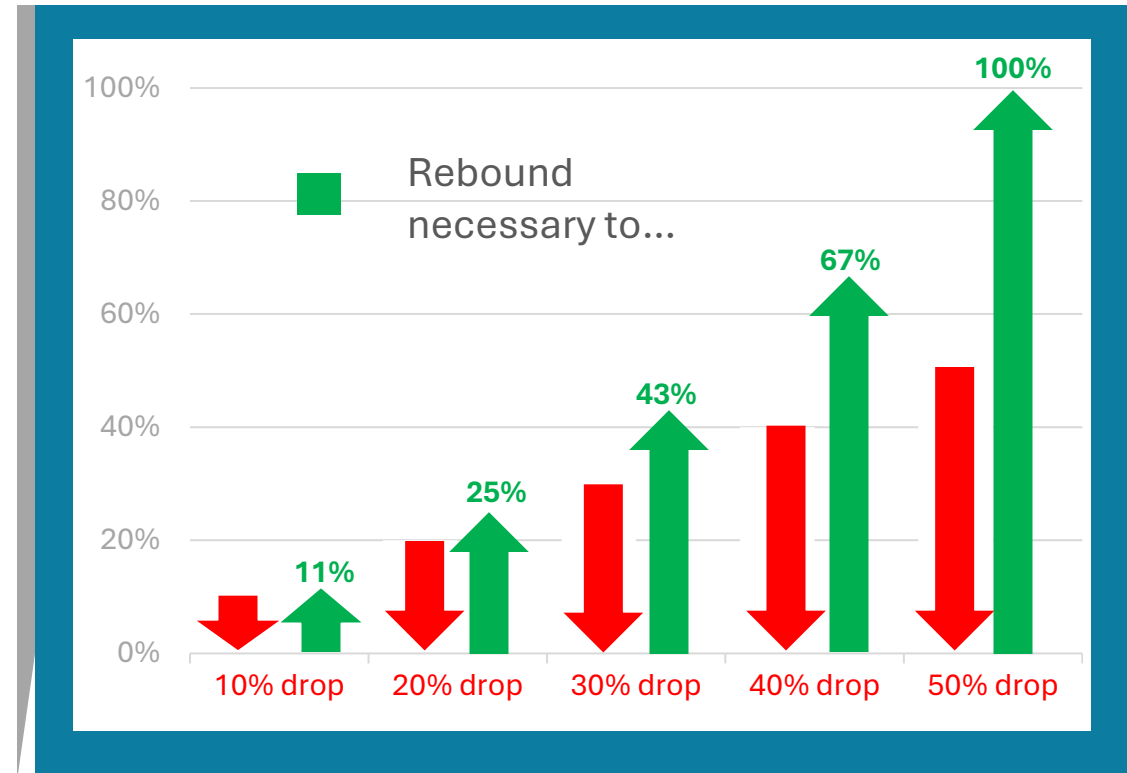

# Why hedge?

- ❑ The S&P 500 suffered an annual decline of >10% five times in the last 22 years
- ❑ Size matters as overcoming larger declines requires an ever greater magnitude of rebound in the market just to break even

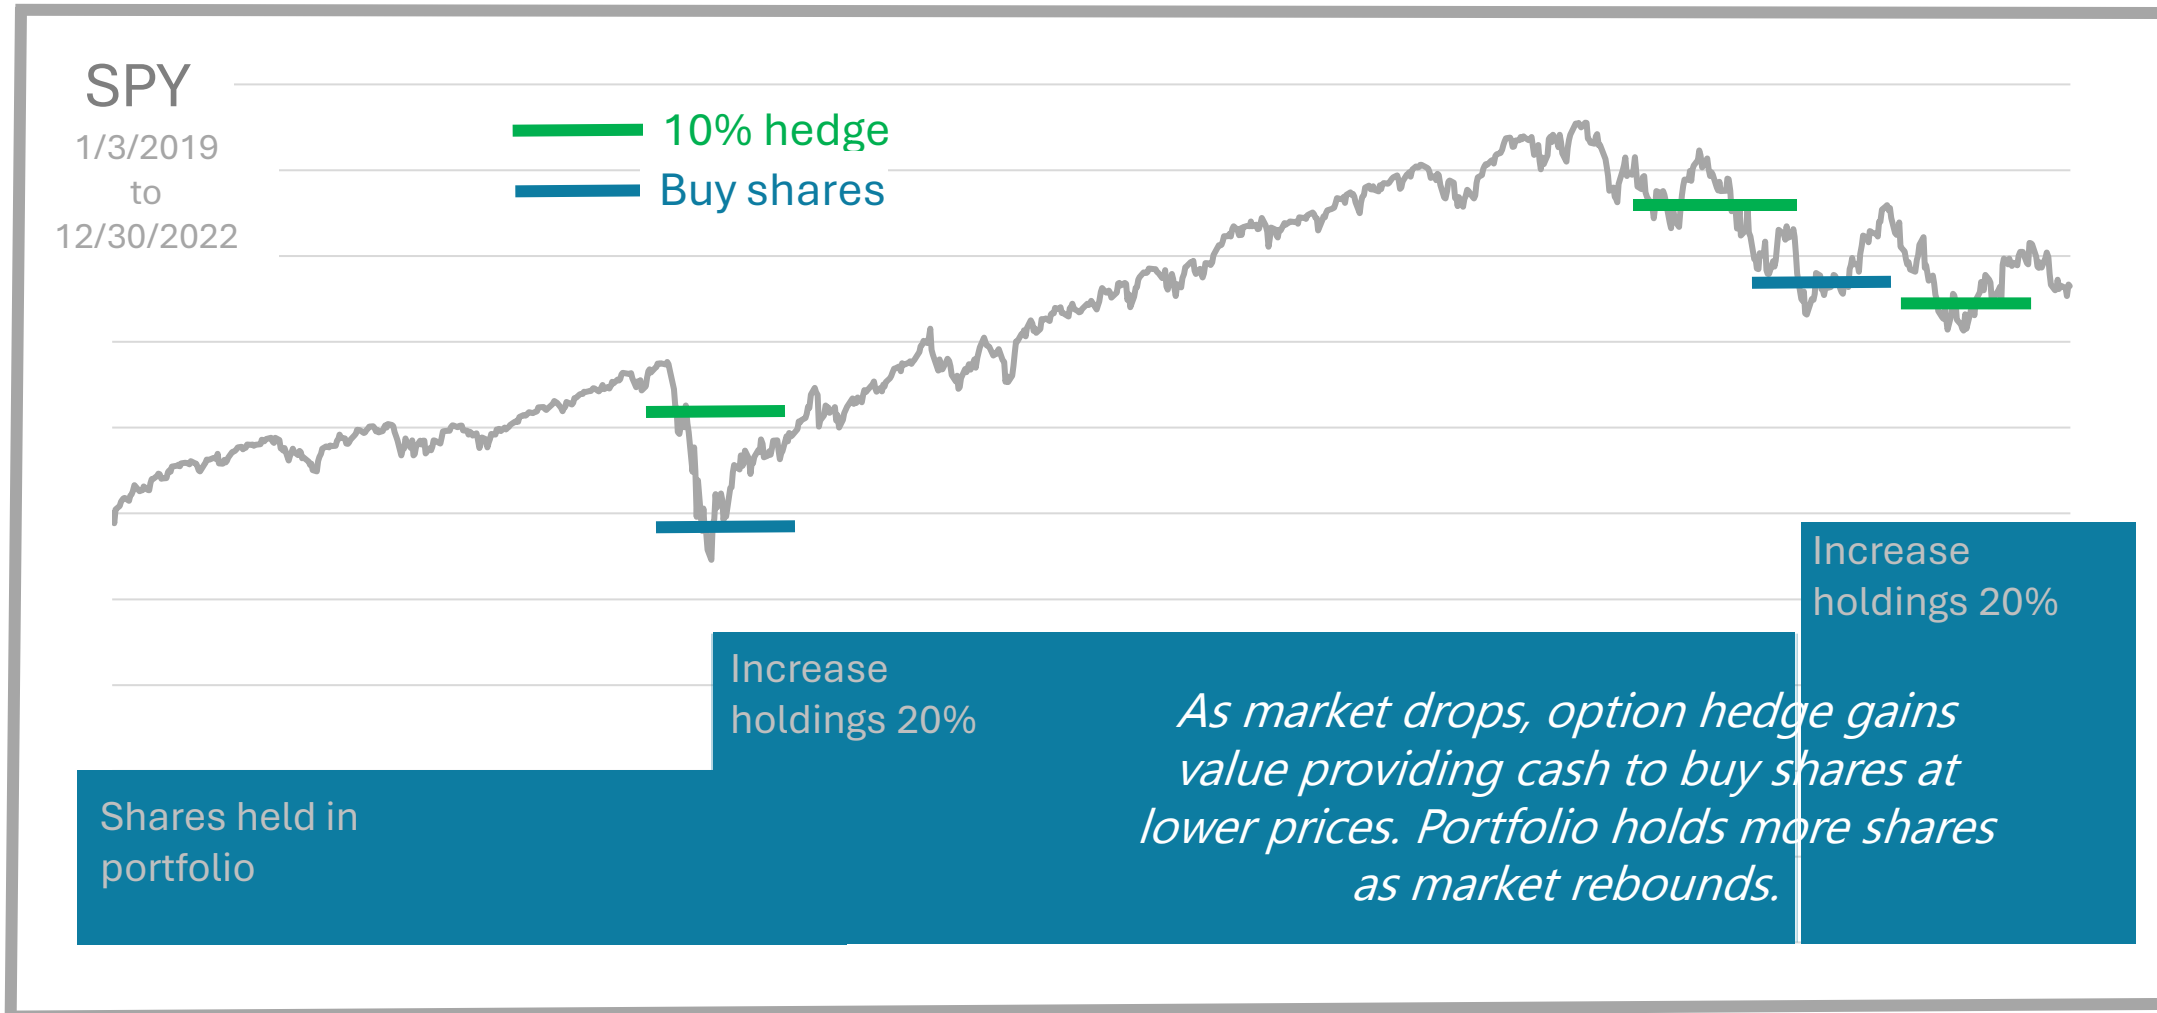

———— 40% drop needs 67% gain ————

- ❑ Avoiding principal losses allows reinvestment at lower market levels potentially increasing investment capital over the long haul
- ❑ Reducing volatility reduces client anxiety allowing for consistent, longer-term investment horizons

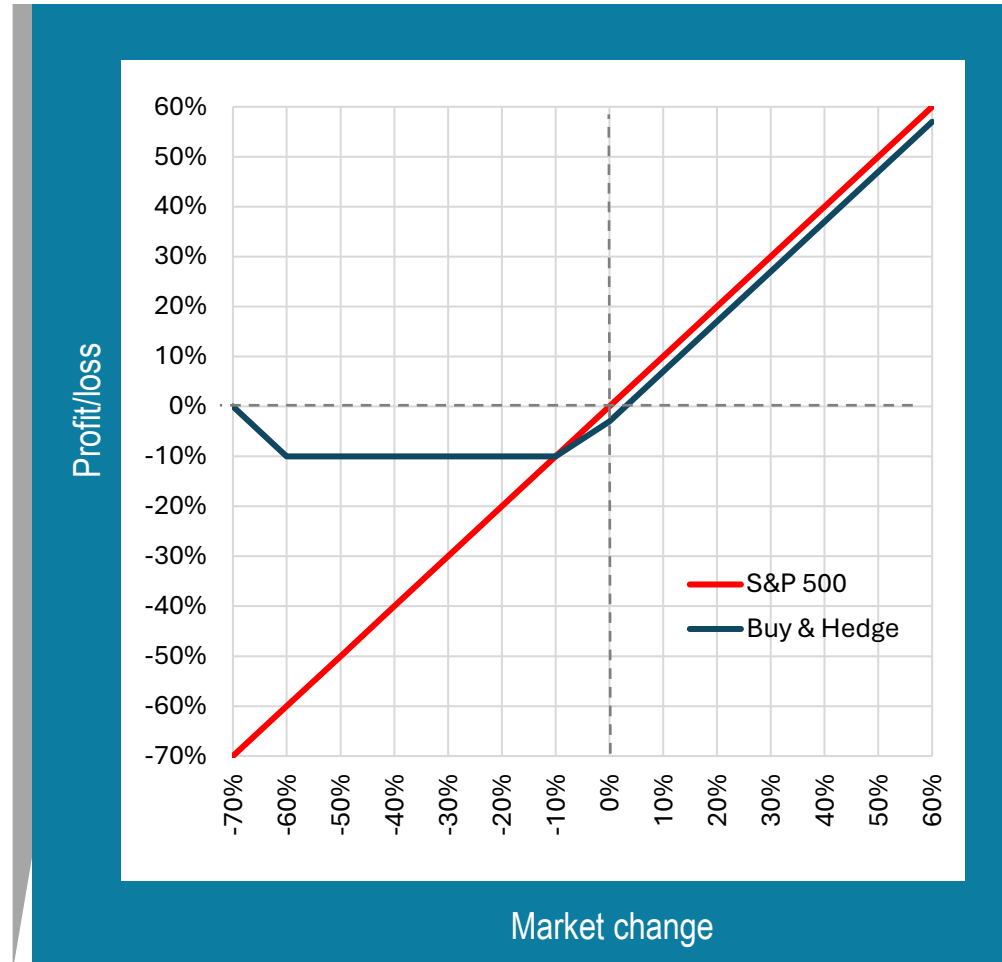

# Theoretical math of hedging

And the two ways to make money: growth in value, reduction in losses

# Buy & Hedge in Classic & Retirement versions

- ❑ B&H equity exposure consists of equity index or option positions depending on which market conditions provide the best advantage for the client
- ❑ Interest rate markets determine which income vehicles B&H holds to offset the cost of certain option positions

# The risks of investing in Buy & Hedge

...and the general downsides of hedging

- ❑ B&H does not protect against market losses of less than 8%
- ❑ B&H rarely participates in the full growth of the S&P 500
- ❑ Higher volatility can increase the cost of long options thereby affecting performance
- ❑ Utilizing options to create equity exposure limits direct participation in stock dividends
- ❑ Cost of hedging causes a drag on equity index returns of 2% to 4% annually
- ❑ Yield-based positions expose the portfolio to fixed income risk

*Fast-moving market declines represent the most significant risk in the strategy*

# Historical client expectations

Hedging delivers positive client outcomes ~90% of the time

S&P Ranges Organized to Show Hedge Breakpoints

1-year market change	Historical frequency	Expected hedged equity return	Expected client sentiment
> +15%	~ 50%	Capture 75-85% of upside market move	Happy to participate in strong market gains. Most likely exceeded planned annual return
+2% to +15%	~20%	Capture 65-75% of upside market move	Happy with gains, but slightly disappointed in hedging drag
-8% to +2%	~10%	Underperformance of 2-4% vs. market	Most disappointing situation. Finds little value in the hedges
-100% to -8%	~20%	Losses limited to 8% per year	Max loss experienced, but should be relieved to be hedged. Optimistic about extra upside exposure on a rebound

# Buy & Hedge - Retirement Through April 30, 2026
